2. Create a new pedestrian crossing from the station to the East side of Quarry Hill Road
   - A new 3 metre wide, angled crossing.
   - Potentially on a count-down timer, for pedestrians to use while the traffic is held safely back on traffic signals in all directions.

3. Install traffic controls at the Quarry Hill Road / Waterloo Road junction
   - Traffic lights would be installed to allow pedestrians safe movement, particularly at peak times.
   - Lights would be controlled to allow for optimal pedestrian and vehicle flow and would be responsive to changing traffic conditions throughout the day.
   - Would require removing the right turn into Priory Road in order to maximise traffic flow on Quarry Hill Road.
